

## Product Description

2-Step pull-through knife sharpener with ceramic and carbide blades. Pre-set angles for precise sharpening and maintaining razor sharp edge. Non-Skid Base for stable grip and Non-Skid Base for Stable grip. Easy to operate quickly re-sharpens your knives.

## Attributes

Material:	Carbide & Ceramic blades
Features:	- Crossed Carbide Blades: Quick Edge Setting - Crossed Ceramic Rods: Razor Sharp Edge - Pre-Set Sharpening Angles - Non-Skid Base for Stable Sharpening
Size:	7.5cm x 5.8cm x 2.4cm.

## Instructions

The sharpener stuffs a 2-step system into its palm-sized frame. For dull blades, use the pair of tungsten carbide blades with pre-set angles to get your edge back. Then run the knife through the sharpener's 2 crossed ceramic rods, also with pre-set angles, to achieve a smooth finish. The sharpener has a non-skid base to hold it in place and help prevent inadvertent hand and finger tests.

1. Insert the blade into the slot at a 90-degree angle to the sharpener (Fig.1)
2. Place blade in carbide cutting heads (black color)
3. Pull knife back towards you 2-3 times while applying light pressure (Fig.2)
4. Place blade in ceramic fine smoothing rods (white color)
5. Pull the knife back towards you 3-4 times while applying stronger pressure.
6. Clean knife with a damp cloth or mild brush.
